

We recommend to install the panels by qualificate workers e.g. by a tailer

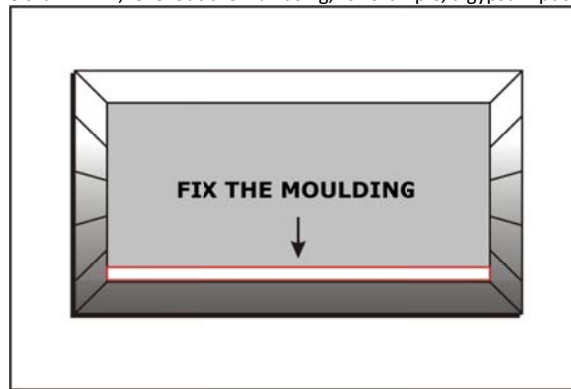

3) Arrange your panels the way you want them on the wall. Measure the wall so that the elements fit your furniture arrangement or interior design in general. Measure the wall and put the panels on the floor the same way they are supposed to be glued to the wall. If numeration is given, please install them in accordance with it.

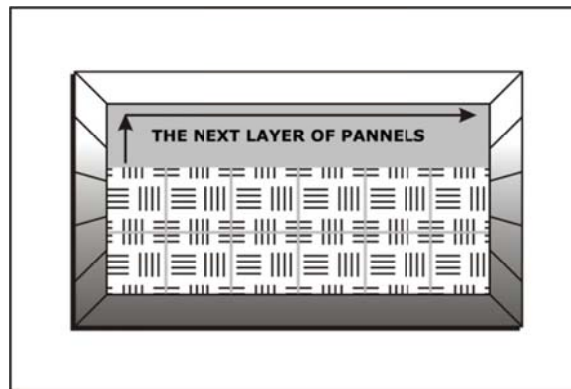

6) Prepare the installation material. We start applying the panels from the bottom, horizontally. Apply the first layer of panels and wait until the glue has set. The panels can be applied using fixing glue, gypsum putty or, for irregularities of over 4 mm, a gypsum glue.

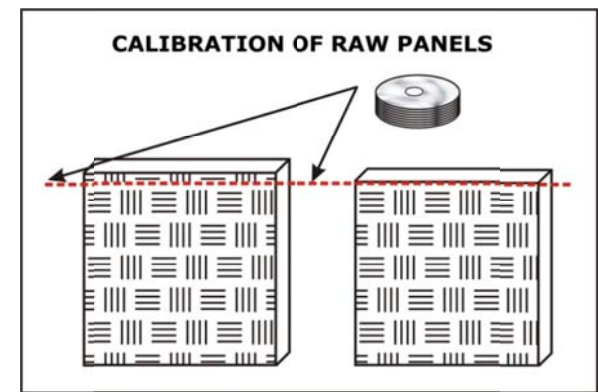

1) Prepare the wall – ensure that the wall to which you are going to apply the decorative panels is even, with no major irregularities(if there are irregularities of more than 4 mm, level out the wall using, for example, a gypsum putty).

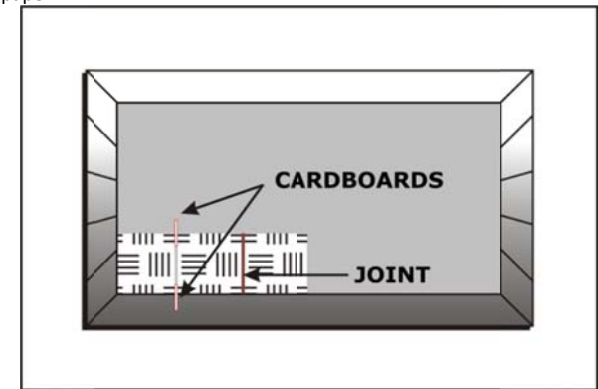

4) Fix the moulding tightly to the wall horizontally, in order to apply the first layer of panels. This will keep the first layer of panels in place. The moulding should be about 2 cm thick.

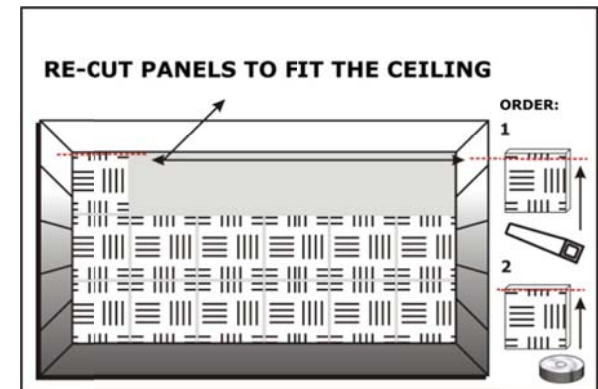

7) After ensuring that the first layer of elements is firmly fixed, you can then go on to apply the remaining panels. Continue until all the rows of panels have been installed as shown in the picture.

2) Raw panels for painting may differ in calibration up to 1mm . If calibration is necessary, you may sand down the side of an element using sandpaper.

5) The individual elements of the decorative panels should be applied at a distance of cardboards, prepared in advance, from 1.5 mm up to 4 mm . Select a joint width to suit your taste.

8) If it is necessary to re-cut the element to fit the ceiling, use an ordinary wood saw and sand the element with 120 grade sandpaper.

Attention!

If the numeration at the back of each panel is given, it is strongly recommended to install the panels in accordance with the numeration.
